Sprechstunden:
Plastische Chirurgie
Kindliche Plexusschäden
Handchirurgie und
-fehlbildungen

As a peripheral nerve surgeon dedicated to brachial plexus surgery since over 15 years, working in Aachen (Germany) and Brussels (Belgium), I have the opportunity since 4 years to cooperate with the Polish foundation ([Fundacja Splotu Ramiennego](#)) concerning patient examination and postoperative follow up, and also to appreciate the cooperation with Dr Maria Grodner, highly skilled rehabilitation specialist.

Within that time, on many occasions, I could experience the skill and accuracy, the motivation and concern for brachial plexus surgery of all members of the Foundation. Their work is a very important contribution to the clinical care and functional improvement of these severely traumatized children and adults. The activities of the Foundation are highly professional, cooperative, of high medical and administrative level.

I strongly support them in all issues and I also encourage the project of building up an independent consultation and counseling platform.

I am entirely satisfied with their help, impressed by the human and intellectual qualities of their members and always ready to support or actively help their activities in Poland for these patient group, which still lacks lot of improvements.

Dr. J. Bahm
Arzt für Plastische- und Handchirurgie
